

# THREAT ASSESSMENT HPTM

Harm-Prevention-Threat-Management

This web-based software allows organizations to efficiently conduct threat assessment inquiries on subjects-of-concern who make direct, indirect or veiled threats of violence or exhibit threatening behaviors.

## THREAT ANALYSIS

Our innovative system allows administrators and authorized system admins to conduct threat assessments on subjects-of-concern, such as students, employees, and other individuals exhibiting threatening behaviors. The proprietary system uses a quantitative algorithm and analyzes qualitative data to determine apparent threat-level of the subject-of-concern. The system is based on violence prevention research related to the Harm Prevention and Threat Management Model (HPTM), Columbia Suicide-Severity Rating Scale, FBI, DHS, and U.S. Secret Service. School-based threat management teams have access to the **CLPS Threat Assessment tool**, that addresses Bullying, Harassment, Self-Harm, Abuse, Targeted Violence, Insider Threats, Outsider Threats, and Title IX Incidents. Comprehensive reports are securely archived but can be accessed by authorized managers for revisions and updates. The system allows for data analytics and the ability to develop customized Student Support Management Plans.

## CUTTING-EDGE ANALYSIS PROCESS

### FULL COMPATABILITY

Access from any computer or mobile device for more efficient data collection and collaboration.

### OBJECTIVE DATA COLLECTION

Data is collected by all members of the threat assessment team and entered in the system.

### RISK-LEVEL CALCULATION

Our quantitative algorithm instantly calculates the data and provides the individual's risk level.

### STUDENT REPORTING

Threatening or concerning behaviors can easily be reported by students to trusted school officials for follow up.

### COMPLIANCE

Reviewed and validated by U.S. Secret Service National Threat Assessment Center
