CLPS®

PREPARE // PREVENT // PROTECT

DIGITAL TRAINING SOFTWARE

Our innovative system allows organizational managers and authorized system admins to deliver and manage employee professional development training. Our software are specifically designed to help schools, businesses, and public and private sector organizations meet complex security challenges.

PREPAREDNESS

Activities here take place before an emergency occurs. This includes the continuous cycle of planning, training, drilling, and evaluating, to prepare the organization for natural and human-caused threats, hazards, and emergencies.

PREVENTION

Activities here take place before an incident occurs. The primary focus is on early intervention strategies to prevent school attacks, workplace and school violence, suicides, and other forms of bullying, harassment, and abuse.

PROTECTION

Activities here take place during an incident. If prevention fails or an event is not preventable, organizations must be able to respond to and recover from incidents effectively. Protection is enhanced by implementing emergency communication and crisis management solutions.

TRAINING FOR COMPLEX SECURITY CHALLENGES

Courses include but are not limited to:

- Active Shooter Preparedness
- Bullying Intervention
- Crisis Management
- Threat and Behavioral Assessment
- Incident Command
- Emergency Reunification

Digital certificates of completion are securely archived in the system.

Authorized managers have access to real-time progress reports to maintain accountability and ensure legal compliance.
